

ADVANTAGES

- Slightly reduced footprint
- Easy filter-replacement maintenance requirements
- Improves engine efficiency & availability with a wide selection of filters
- Three-stage, close-coupled static filter system with higher efficiency
- It offers good flexibility to adapt your filter solution to changing environmental/operational conditions

Application	Recommended in most environmental conditions
Installation Options	<p>Weather hoods (rain or snow)</p> <p>A droplet separator for mist &amp; moisture protection</p> <p>A pre-filter stage; a panel or a bag filter</p> <p>A high efficiency stage closed couple to the final filter stage</p> <p>A final EPA filter stage; a compact filter from E10-H13 efficiency</p> <p>This is a solution for small footprint</p> <p>Other features can be added depending on the environment, such as an anti-icing/air inlet heating system, air inlet cooling system, trash or insect screens</p> <p>Can be supplied in painted carbon steel, stainless steel or marine grade aluminum</p>
Comment	Contact your nearest Camfil office for sizing, staging and configurations choice. Ask us for a Life Cycle Cost evaluation based on your site conditions and/or request an on-site evaluation of your site conditions to validate the required level of protection.
